

## Hyundai Motor Manufacturing Alabama, LLC

	Hyundai Motor Manufacturing Alabama, Information Sheet (January 2020)
Overview	Hyundai Motor Manufacturing Alabama (HMMA), headquartered in Montgomery, Ala., is an independent manufacturing operation
Overview	
	of Hyundai Motor Company, based in Seoul, South Korea. HMMA currently produces the 2021 Sonata and Elantra sedans and the
	2021 Santa Fe crossover utility vehicle. HMMA can produce 390,000 vehicles annually. HMMA cars and sport utility vehicles are
	distributed throughout North America, Canada, United States and Puerto Rico. In the United States, Hyundai vehicle sales are
	managed by Hyundai Motor America and are sold and serviced by nearly 800 Hyundai dealerships nationwide.
Specifications	Current Capital Project Investment: \$1.8 billion, Property: 1,744 acres Facility: 3.4 million square feet
	Employment
	HMMA currently employs approximately 3,000 Team Members
	Production Details
	Groundbreaking took place in April 2002
	HMMA began production of the 2006 Sonata in May 2005
	Production of the Elantra compact sedan began in November 2010
	• From 2006-2010, HMMA manufactured the Hyundai Santa Fe SUV. In June 2016, the Santa Fe Sport returned to HMMA. In
	2018 the Santa Fe Sport was rebranded Santa Fe.
	<ul> <li>Production of the 2022 Hyundai Tucson will begin in February 2021</li> </ul>
	<ul> <li>Smartstream G2.5 GDI, G1.6 T-GDI, G2.0 Atkinson, G2.5 GDI, and G2.5 T-GDI engines.(GDI stands for Gasoline Direct</li> </ul>
	Injection and T-GDI stands for Turbo-Gasoline Direct Injection)
	A record 399,500 vehicles were built during calendar year 2013
	650+ robots
	Economic Impact - HMMA
	<ul> <li>HMMA annual payroll is approximately \$260 million.</li> </ul>
	<ul> <li>HMMA supports 14,436 direct and indirect jobs in Alabama</li> </ul>
	HMMA spends approximately \$6.3 billion per year to support its manufacturing operation and maintain its facility and
	investment, with approximately \$3.1 billion this total spent with Alabama-based businesses.
	<ul> <li>HMMA's total economic impact is approximately \$4.8 billion per year</li> </ul>
Facility Details	Stamping Shop
	HMMA's advanced Stamping Shop includes two stamping presses, which deliver a combined force of 5,400 tons of pressure press
	pieces of steel into car parts. All material that flows from the Stamping Shop into the Welding Shop is 100-percent automated.
	Welding
	After arriving by electro-monorails from the Stamping Shop, over 360 robots in the Welding Shop weld and seal car parts using a
	100 percent automated process. Automation prevents possible damage to the steel and helps ensure quality and consistency.
	Paint
	In the Paint Shop, each vehicle body is thoroughly cleaned and a zinc-phosphate coating is applied. This coating allows the water
	In the Paint Shop, each vehicle body is thoroughly cleaned and a zinc-phosphate coating is applied. This coating allows the water based undercoat to adhere to the car body. The body is submarged in a cathode din bath to provide correction resistance, then
	based undercoat to adhere to the car body. The body is submerged in a cathode dip bath to provide corrosion resistance, then
	based undercoat to adhere to the car body. The body is submerged in a cathode dip bath to provide corrosion resistance, then rotated 360 degrees through each tank (ten full rotations throughout the whole system) to eliminate any air bubbles in body
	based undercoat to adhere to the car body. The body is submerged in a cathode dip bath to provide corrosion resistance, then
	based undercoat to adhere to the car body. The body is submerged in a cathode dip bath to provide corrosion resistance, then rotated 360 degrees through each tank (ten full rotations throughout the whole system) to eliminate any air bubbles in body cavities. The vehicle is primed, and then painted with a topcoat and clear coat. 100-percent of the actual paint application is automated and the primer and base coat colors are water-based, which is safer for the environment.
